3U Sample

Mount Vernon, WA – [Stealth Acoustics](http://www.stealthacoustics.com) announces immediate availability of custom laser engraved blank rack panels. Made from high quality extruded aluminum with a brushed anodized black surface finish, these standard 19" wide customized blank rack filler panels are available in either 1U (1-3/4") 2U (3-1/2") or 3U (5-1/4") heights. Panels are permanently etched using a laser engraver that removes the panel surface anodization, revealing the native silver aluminum look beneath. Most graphic formats and fonts are supported.

"We have invested in building a solid network of authorized Stealth Acoustics dealers, many of whom are best in their area at what they do in providing professionally installed systems, and we have the inherent manufacturing capabilities and resources to create customized panels at very competitive pricing" Said Paul Hagman, president of Stealth Acoustics. "Offering a very cost effective customized rack panel product line that brands a job with the dealers name and contact information improves our dealer's image and helps them become more successful." Stealth also noted that the service is not limited to just engraving a dealer's logo and information, in that practically any graphic information or text may be engraved including custom branding of a clients preferred information on a particular job. Stealth will entertain other custom laser engraving requests from dealers as they may arise.

Dealer pricing for a single space blank black anodized aluminum panel, engraved with the dealers information is as low as \$9.00 each, plus minor setup charges.

Stealth Acoustic products are distributed world-wide by our directly franchised value added resellers, custom installers and distributors. Contact [Stealth Acoustics](#) for pricing or [Click here](#) for additional information on Stealth Acoustics.
